Witten, Johannes Loeffler.

TESTING OF SHEET GLASS FOR SENSITIVITY TO CLIMATE. [1962] 16p. (5 figs. 21 refs. omitted).
Order from SLA \$1.60

62-14499

Trans. of Glastechn[ische] Ber[ichte] (West Germany) 1956, v. 29, no. 4, p. 131-137.

DESCRIPTORS: *Glass; Sensitivity, *Climatic factors, Test methods.

Sheet glass is decomposed by moisture only in its packing, either by wet rain or when stored in moist rooms. Two types of decomposition appear as damages, which show, however, the same technical course and produce the same typical defect, the so-called dulling, which is absence of reflection by chemical changes in the top layer. The testing method described here reproduces, in contrast to all other methods, the defect (Materials--Ceramics, TT, v. 8, no. 1) (over)
